PlastPack Defence (PPD) Awarded 273 Million DKK Contract

PPD is proud to announce their new lightweight plastic, drop-in replacement ammunition box solutions for small calibre arms, replacing existing metal ammunition boxes.

Nammo Raufoss AS, Norway has awarded PPD a 273 Million DKK (~€37m) contract for the design, development, qualification and marketing of lightweight, high-density plastic, small-calibre ammunition boxes. The memorandum of understanding (MoU) with Nammo Raufoss AS spans a ten-year period to manufacture drop-in replacement ammunition boxes for 5.56mm and 12.7mm ammunition. This new design concept for ammunition boxes will significantly reduce the weight by 50%, improve storage and packaging stability, enhance thermal features and provide increased shock resistance.

Design and development has been completed, and PPD has manufactured prototypes entering the final test and qualification phase according to military standards.

PPD is expected to employ 75-100 highly skilled blue and white collar workers in Denmark within production, engineering and design, and is looking forward to introducing its new lightweight packaging solution for the military industry at the DESi exhibition, 10-13 SEP 2013, London, UK where a prototype will be on display. Plan to visit their stand, no S7-168, or email them to schedule an appointment for a presentation at: je@ppddk.dk.
